 Consider a many-to-one variant RNN (e.g. sentiment analysis)

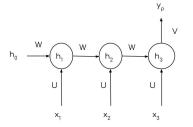

- Consider a many-to-one variant RNN (e.g. sentiment analysis)
- 2 Let's separate the parameters into U, V, and W

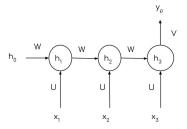

- Let's now perform SGD 1 (assume loss L is formulated on y_p)

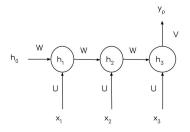

- Let's now perform SGD (assume loss L is formulated on yp)

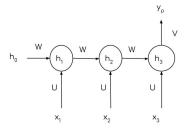

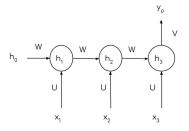

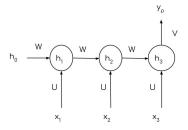

3 Since we know that h_3, b_y are independent of V, we can compute $\frac{\partial L}{\partial V}$ in a single step

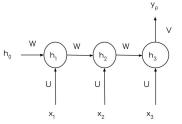

1 Let's now consider $\frac{\partial L}{\partial W}$

Dr. Konda Reddy Mopuri

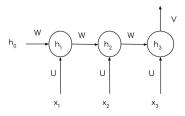

- 1 Let's now consider $\frac{\partial L}{\partial W}$
- There are multiple 'W's in the computational graph!

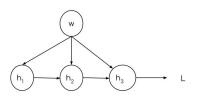

γ_ρ

 For ease of understanding

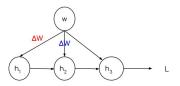

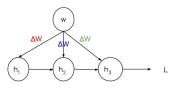

- $\begin{array}{c} \textcircled{0} \quad \underline{\Delta w} \text{ change in } \mathbb{W} \\ \left(\frac{\partial h_1}{\partial W} \cdot \Delta w \right) \text{ change in } h_1 \end{array}$

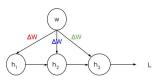

- $\begin{array}{c} \label{eq:main_states} \bullet & \Delta w \text{ change in } \mathsf{W} \rightarrow \\ & \left(\frac{\partial h_1}{\partial W} \cdot \Delta w \right) \text{ change in } h_1 \end{array}$
- 2 Δw change in $W \rightarrow \left(\frac{\partial h_2}{\partial W} \cdot \Delta w\right)$ change in h_2
- $\begin{array}{l} \textbf{3} \quad \Delta w \text{ change in } \mathsf{W} \rightarrow \\ \left(\frac{\partial h_3}{\partial W} \cdot \Delta w \right) \text{ change in } h_3 \end{array}$

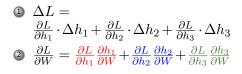

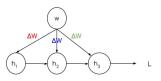

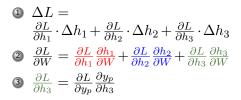

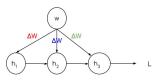

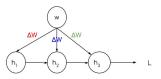

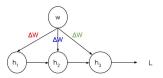

$\Delta L =$ $\frac{\partial L}{\partial h_1} \cdot \Delta h_1 + \frac{\partial L}{\partial h_2} \cdot \Delta h_2 + \frac{\partial L}{\partial h_3} \cdot \Delta h_3$ $\frac{\partial L}{\partial W} = \frac{\partial L}{\partial h_1} \frac{\partial h_1}{\partial W} + \frac{\partial L}{\partial h_2} \frac{\partial h_2}{\partial W} + \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial W}$ $\frac{\partial L}{\partial h_3} = \frac{\partial L}{\partial y_p} \frac{\partial y_p}{\partial h_3}$ $\frac{\partial L}{\partial h_2} = ?$

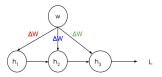

$\begin{aligned} & \Delta L = \\ & \frac{\partial L}{\partial h_1} \cdot \Delta h_1 + \frac{\partial L}{\partial h_2} \cdot \Delta h_2 + \frac{\partial L}{\partial h_3} \cdot \Delta h_3 \\ & 2 \quad \frac{\partial L}{\partial W} = \frac{\partial L}{\partial h_1} \frac{\partial h_1}{\partial W} + \frac{\partial L}{\partial h_2} \frac{\partial h_2}{\partial W} + \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial W} \\ & 3 \quad \frac{\partial L}{\partial h_3} = \frac{\partial L}{\partial y_p} \frac{\partial y_p}{\partial h_3} \\ & 4 \quad \frac{\partial L}{\partial h_2} =? \\ & 5 \quad \frac{\partial L}{\partial h_2} = \frac{\partial L}{\partial h_2} \frac{\partial h_3}{\partial h_2} \end{aligned}$

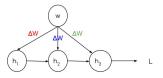

$\begin{array}{l} \mathbf{\Delta} L = \\ \frac{\partial L}{\partial h_1} \cdot \Delta h_1 + \frac{\partial L}{\partial h_2} \cdot \Delta h_2 + \frac{\partial L}{\partial h_3} \cdot \Delta h_3 \\ \mathbf{2} \quad \frac{\partial L}{\partial W} = \frac{\partial L}{\partial h_1} \frac{\partial h_1}{\partial W} + \frac{\partial L}{\partial h_2} \frac{\partial h_2}{\partial W} + \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial W} \\ \mathbf{3} \quad \frac{\partial L}{\partial h_3} = \frac{\partial L}{\partial y_p} \frac{\partial y_p}{\partial h_3} \\ \mathbf{4} \quad \frac{\partial L}{\partial h_2} = ? \\ \mathbf{5} \quad \frac{\partial L}{\partial h_2} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_2} \\ \mathbf{6} \quad \frac{\partial L}{\partial h_1} = \frac{\partial L}{\partial h_2} \frac{\partial h_3}{\partial h_1} = \frac{\partial L}{\partial h_2} \frac{\partial h_3}{\partial h_2} \frac{\partial h_2}{\partial h_1} \\ \end{array}$

 $\begin{array}{l} \mathbf{0} \quad \frac{\partial L}{\partial W} = \frac{\partial L}{\partial h_1} \frac{\partial h_1}{\partial W} + \frac{\partial L}{\partial h_2} \frac{\partial h_2}{\partial W} + \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial W} \\ \mathbf{0} \quad \frac{\partial L}{\partial h_2} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_2} \\ \mathbf{3} \quad \frac{\partial L}{\partial h_1} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_1} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_2} \frac{\partial h_2}{\partial h_1} \end{array}$

 $\begin{array}{ll} \begin{array}{l} \begin{array}{l} \frac{\partial L}{\partial W} = \frac{\partial L}{\partial h_1} \frac{\partial h_1}{\partial W} + \frac{\partial L}{\partial h_2} \frac{\partial h_2}{\partial W} + \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial W} \\ \end{array} \\ \begin{array}{l} \begin{array}{l} \frac{\partial L}{\partial h_2} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_2} \\ \end{array} \\ \begin{array}{l} \begin{array}{l} \frac{\partial L}{\partial h_1} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_1} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_2} \frac{\partial h_2}{\partial h_1} \\ \end{array} \\ \begin{array}{l} \begin{array}{l} \frac{\partial L}{\partial W} = \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_2} \frac{\partial h_2}{\partial h_1} \frac{\partial h_1}{\partial W} + \\ \frac{\partial L}{\partial h_3} \frac{\partial h_2}{\partial h_2} \frac{\partial h_2}{\partial W} + \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial W} \end{array} \end{array} \end{array}$

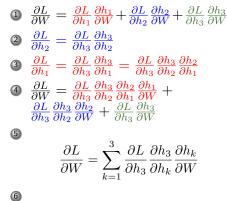

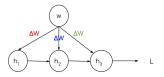

$$\frac{\partial L}{\partial W} = \sum_{k=1}^{3} \frac{\partial L}{\partial h_3} \frac{\partial h_3}{\partial h_k} \frac{\partial h_k}{\partial W}$$

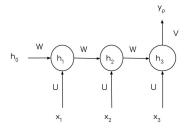

$$\frac{\partial L}{\partial W} = \sum_{k=1}^{3} \frac{\partial L}{\partial h_3} \left(\prod_{j=k+1}^{3} \frac{\partial h_j}{\partial h_{j-1}} \right) \frac{\partial h_k}{\partial W}$$

Dr. Konda Reddy Mopuri

 Consider a many-to-many variant RNN (e.g. PoS tagging)

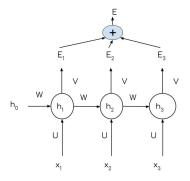

- Consider a many-to-many variant RNN (e.g. PoS tagging)
- Full sequence is one training example (although there is an error computed at each time step)

- Consider a many-to-many variant RNN (e.g. PoS tagging)
- 2 Total error is the sum of errors at each time step

1 At times, sequences can be quite lengthy!

- At times, sequences can be quite lengthy!
- ② Need to perform BPTT through many layers

- At times, sequences can be quite lengthy!
- ② Need to perform BPTT through many layers

 $\frac{\partial L}{\partial W} = \sum_{k=1}^{3} \frac{\partial L}{\partial h_3} \bigg(\prod_{j=k+1}^{3} \frac{\partial h_j}{\partial h_{j-1}} \bigg) \frac{\partial h_k}{\partial W}$

- At times, sequences can be quite lengthy!
- ② Need to perform BPTT through many layers

 $\frac{\partial L}{\partial W} = \sum_{k=1}^{3} \frac{\partial L}{\partial h_3} \left(\prod_{j=k+1}^{3} \frac{\partial h_j}{\partial h_{j-1}} \right) \frac{\partial h_k}{\partial W}$

4 Leads to Vanishing Gradient problem!

- At times, sequences can be quite lengthy!
- ② Need to perform BPTT through many layers

$$\frac{\partial L}{\partial W} = \sum_{k=1}^{3} \frac{\partial L}{\partial h_3} \bigg(\prod_{j=k+1}^{3} \frac{\partial h_j}{\partial h_{j-1}} \bigg) \frac{\partial h_k}{\partial W}$$

- 4 Leads to Vanishing Gradient problem!
- So impact of earlier time steps at later times (difficult to learn long-term dependencies!)

We may move on from sigmoid/tanh (e.g. ReLU) and your gradients may not die

- We may move on from sigmoid/tanh (e.g. ReLU) and your gradients may not die
- 2 In some cases $\left(\prod_{j=k+1}^{3} \frac{\partial h_{j}}{\partial h_{j-1}}\right)$ may lead to exploding gradients

- We may move on from sigmoid/tanh (e.g. ReLU) and your gradients may not die
- 2 In some cases $\left(\prod_{j=k+1}^{3} \frac{\partial h_{j}}{\partial h_{j-1}}\right)$ may lead to exploding gradients
- 3 But, not much of an issue

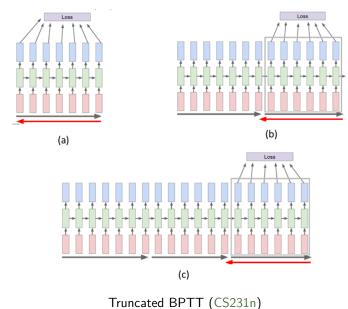

- We may move on from sigmoid/tanh (e.g. ReLU) and your gradients may not die
- 2 In some cases $\left(\prod_{j=k+1}^{3} \frac{\partial h_{j}}{\partial h_{j-1}}\right)$ may lead to exploding gradients
- 3 But, not much of an issue
 - Easy to diagnose (NaN)
 - Gradient clipping

- We may move on from sigmoid/tanh (e.g. ReLU) and your gradients may not die
- 2 In some cases $\left(\prod_{j=k+1}^{3} \frac{\partial h_{j}}{\partial h_{j-1}}\right)$ may lead to exploding gradients
- 3 But, not much of an issue
 - Easy to diagnose (NaN)
 - Gradient clipping
- Better initialization, Regularization, short time sequences (Truncation)

LSTM: The cell state

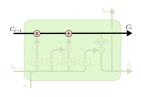

LSTM: The cell state

 Info. can flow through unchanged

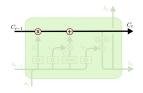

LSTM: The cell state

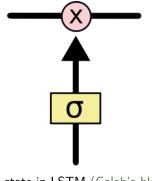

- Info. can flow through unchanged
- ② Gates can add/remove information to cell state

LSTM: The gates

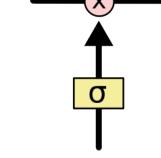

Sigmoid neural nets (o/p numbers in [0, 1])

LSTM: The gates

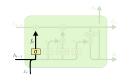

- Sigmoid neural nets (o/p numbers in [0, 1])
- 2 Point-wise multiplication operation

LSTM: The forget gate

Decides what to throw away from cell state (e.g. forgetting the gender of old subject in light of a new one)

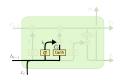

$$f_t = \sigma \left(W_f \cdot [h_{t-1}, x_t] + b_f \right)$$

Forget gate in LSTM (Colah's blog)

LSTM: The input gate

Next is to decide what new to store in cell state (e.g. add the gender of a new subject)

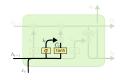

$$\begin{split} i_t &= \sigma \left(W_i \! \cdot \! \left[h_{t-1}, x_t \right] \; + \; b_i \right) \\ \tilde{C}_t &= \tanh(W_C \! \cdot \! \left[h_{t-1}, x_t \right] \; + \; b_C) \end{split}$$

Input gate in LSTM (Colah's blog)

LSTM: The input gate

- Next is to decide what new to store in cell state (e.g. add the gender of a new subject)
- 2 Done in two steps
 - input gate decides what to update
 - A tanh layer creates a candidate cell state

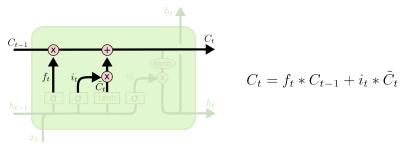

$$\begin{split} i_t &= \sigma \left(W_i \cdot [h_{t-1}, x_t] \ + \ b_i \right) \\ \tilde{C}_t &= \tanh(W_C \cdot [h_{t-1}, x_t] \ + \ b_C) \end{split}$$

Input gate in LSTM (Colah's blog)

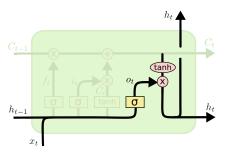

LSTM: The cell state update

LSTM: The output

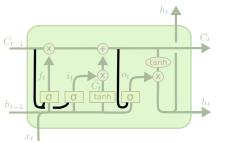

$$o_t = \sigma \left(W_o \left[h_{t-1}, x_t \right] + b_o \right)$$
$$h_t = o_t * \tanh \left(C_t \right)$$

Output computation in LSTM (Colah's blog)

e.g. may be a verb that is coming next in case of a language model

LSTM variant: Peephole connections

 $\begin{aligned} f_t &= \sigma \left(W_f \cdot [\boldsymbol{C_{t-1}}, h_{t-1}, x_t] + b_f \right) \\ i_t &= \sigma \left(W_i \cdot [\boldsymbol{C_{t-1}}, h_{t-1}, x_t] + b_i \right) \\ o_t &= \sigma \left(W_o \cdot [\boldsymbol{C_t}, h_{t-1}, x_t] + b_o \right) \end{aligned}$

Variant with gates looking into the Cell state in LSTM by Ger et al. (Colah's $\mathsf{blog})$

 $C_t = f_t * C_{t-1} + (1 - f_t) * \tilde{C}_t$

Variant with coupled input and forget gates. (Colah's blog)

$\textbf{LSTM} \rightarrow \textbf{GRU}$

Gated Recurrent Unit (Colah's blog)

I Via the gates!

1 Computational graph at time k-1

$\label{eq:ck} \begin{array}{ll} \mathbf{\hat{C}}_k = \\ \tanh(W_c[h_{t-1}, x_t] + b_c) \end{array} \end{array}$

Dr. Konda Reddy Mopuri

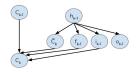

All the gates

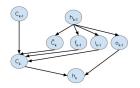

Dr. Konda Reddy Mopuri

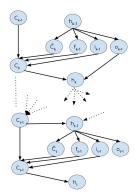

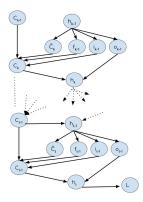

Next hidden state

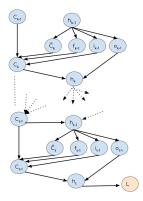

Running till time step 't'

 Consider loss computation

 Let's know if the gradient flows to an arbitrary time step 'k'

 Specifically, let's consider if gradient flows to W_f through C_k

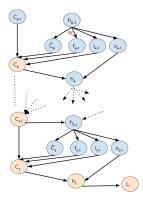

- Specifically, let's consider if gradient flows to W_f through C_k
- Note that there are multiple paths between L and C_k (but, consider one such path as highlighted)

 $\begin{array}{ll} \mathbf{0} \quad \mathsf{Grad} = \\ \frac{\partial L}{\partial h_t} \frac{\partial h_t}{\partial C_t} \frac{\partial C_t}{\partial C_{t-1}} \cdots \frac{\partial C_{k+1}}{\partial C_k} \end{array}$

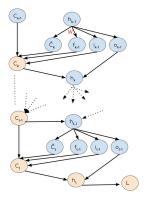

- $\begin{array}{ll} \mathbf{0} \quad \mathsf{Grad} = \\ \frac{\partial L}{\partial h_t} \frac{\partial h_t}{\partial C_t} \frac{\partial C_t}{\partial C_{t-1}} \cdots \frac{\partial C_{k+1}}{\partial C_k} \end{array}$
- 2 $\frac{\partial L}{\partial h_t}$ doesn't vanish (no intermediate nodes)

- 2 $\frac{\partial L}{\partial h_t}$ doesn't vanish (no intermediate nodes)

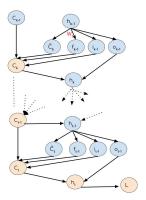

- $\begin{array}{ll} \mathbf{G} \operatorname{Frad} = \\ \frac{\partial L}{\partial h_t} \frac{\partial h_t}{\partial C_t} \frac{\partial C_t}{\partial C_{t-1}} \cdots \frac{\partial C_{k+1}}{\partial C_k} \end{array}$
- 2 $\frac{\partial L}{\partial h_t}$ doesn't vanish (no intermediate nodes)

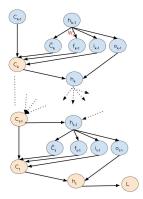

(3)
$$h_t = o_t \odot \sigma(C_t)$$

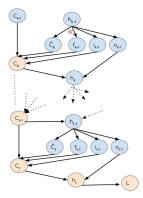

$$C_t = f_t \odot C_{t-1} + i_t \odot \tilde{C}_t$$

- $C_t = f_t \odot C_{t-1} + i_t \odot \tilde{C}_t$
- Note that *C_t* depends on *C_{t-1}*, and for simplicity assume the gradient from that term vanishes

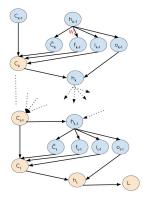

- $C_t = f_t \odot C_{t-1} + i_t \odot \tilde{C}_t$
- Note that *C̃*_t depends on *C*_{t-1}, and for simplicity assume the gradient from that term vanishes

3 Grad =

$$\frac{\partial L}{\partial h_t} \frac{\partial h_t}{\partial C_t} \frac{\partial C_t}{\partial C_{t-1}} \dots \frac{\partial C_{k+1}}{\partial C_k}$$

- $C_t = f_t \odot C_{t-1} + i_t \odot \tilde{C}_t$
- Note that *C̃*_t depends on *C*_{t-1}, and for simplicity assume the gradient from that term vanishes
- $\begin{array}{l} \Im \quad \mathsf{Grad} = \\ \frac{\partial L}{\partial h_t} \frac{\partial h_t}{\partial C_t} \frac{\partial C_t}{\partial C_{t-1}} \cdots \frac{\partial C_{k+1}}{\partial C_k} \end{array}$
- $\begin{array}{l} \textcircled{O} \quad \mathsf{Grad} = \\ \mathbb{L}' \cdot \mathbb{D}(o_t \odot \sigma'(C_t)) \mathbb{D}(f_t) \cdot \\ \mathbb{D}(f_{t-1}) \dots \mathbb{D}(f_{k+1}) \end{array}$

- 2 Red term vanishes only if during the forward pass this product caused the information to vanish (by the time 't')!

- 2 Red term vanishes only if during the forward pass this product caused the information to vanish (by the time 't')!
- 3 That means, gradient will vanish only if dependency in the forward pass vanishes! (which makes sense)

- 2 Red term vanishes only if during the forward pass this product caused the information to vanish (by the time 't')!
- 3 That means, gradient will vanish only if dependency in the forward pass vanishes! (which makes sense)
- Gates do the same regulation in backward pass as they do in the forward

Dominated until 2015

- Dominated until 2015
